Digital
Table Throws

From photographic images to color gradations to multi-colored complex logos… Graphically, there are no limits.

Now, you can change any 6' or 8' table from subdued to vibrant in seconds with our fabric *Digital Table Throws.*

Literally, anything you can draw on a computer screen can be printed on fabric, thanks to Dye Sublimation, a large format, full color digital print process where its special inks make a permanent bond with the printed polyester fabric.

This means that, unlike print processes for our other table coverings, there are no limitations on image sizes. Your graphics can cover the entire table, the sides or just the front panel. The nice thing is you have options.
